

WHAT IS CLAIMED IS:

1. A thermoplastic molding composition comprising
 - 5 A) 40 to 99 parts by weight polyamide,
 - B) 0.5 to 50 parts by weight graft polymer,
 - C) 0.1 to 30 parts by weight mineral in particulate form,
 - D) 0 to 1.5 parts by weight electrically conductive carbon particles,
 - 10 E) 0.1 to 15 parts by weight of at least one member selected from the group consisting of polyester ether amide, polyester/ether block copolymer and polyamide/polyester block copolymer,the sum of the parts by weight of components A) through E) totalling 100.
2. The composition according to Claim 1 further comprising at least one
15 member selected from the group consisting of compatibility promoter, rubber-free vinyl (co)polymer, phenolformaldehyde resin and polymer additive.
3. The composition according to Claim 2 wherein the polyamide is present in
20 an amount of 50 to 85 parts by weight, the graft polymer is present in an amount of 1 to 30 parts by weight, the mineral particles are present in an amount of 1 to 20 parts by weight, and at least one member is present in an amount of 1 to 12 parts by weight.
- 25 4. The composition according to Claim 1 further containing up to 30 parts by weight of at least one rubber-free vinyl (co)copolymer formed from F.1) a vinyl aromatic monomer, F.2) at least one monomer selected from the group comprising C₂ to C₁₂ alkyl methacrylates, C₂ to C₁₂ alkyl acrylates, acrylonitriles and methacrylonitriles and F.3) α,β -unsaturated components
30 containing dicarboxylic anhydrides.

5. The composition according to Claim 1 wherein the graft polymer contains a grafted phase polymerized from

B.1.1) at least one member selected from the group consisting of styrene, α methylstyrene, halogen-substituted or alkyl-ring-substituted styrenes, (meth)acrylic C₁-C₈ alkyl esters, and

B.1.2) at least one member selected from the group consisting of unsaturated nitriles, (meth)acrylic C₁-C₈ alkyl esters and derivatives of unsaturated carboxylic acids, and

a graft base having glass transition temperature ≤ 10 °C.

6. The composition according to Claim 5 wherein the graft base is at least one member selected from the group consisting of diene rubber, copolymer of diene rubber, acrylate rubber, polyurethane/silicone rubber, chloroprene rubber and ethylene/vinyl-acetate rubber.

7. The composition according to Claim 5 wherein the graft base is at least one member selected from the group consisting of diene rubbers, copolymer of diene rubber and acrylate rubber.

8. The composition according to Claim 7 wherein the graft base is polybutadiene.

9. The composition according to Claim 1 wherein the electrically conductive carbon is at least one member selected from the group consisting of carbon blacks, graphites and carbon nanofibrils.

10. The composition according to Claim 1 wherein the mineral is at least one member selected from the group consisting of talc, mica, clay-bank minerals, montmorillonite, kaolin, vermiculite and wollastonite.

11. The composition according to Claim 10 wherein the member is at least one member selected from the group consisting of talc and wollastonite.
12. The composition according to Claim 2 wherein the member is
5 phenolformaldehyde resin present in an amount of 1 to 12 parts by weight.
13. A molded article comprising the composition according to Claim 1.
